PATH is a leader in the battle to control and eliminate malaria nationally, regionally, and ultimately to eradicate it worldwide.

With our unparalleled portfolio of malaria projects, we are partnering with countries and organizations around the world to make malaria history.
PATH is accelerating progress with innovative tools and approaches to combat malaria.

**THE CHALLENGE**

Malaria is still a devastating disease that imposes massive social and economic hardships on families and countries where the disease has yet to be eliminated. Approximately 400,000 people die from malaria every year.

**THE OPPORTUNITY**

Eliminating malaria will bring enormous long-term benefits by helping to improve maternal and child health, enhance economic outcomes, and achieve the Sustainable Development Goals. We have a critical window of opportunity to curtail emerging threats and reoccurring costs, and realize the full benefits of our investments.

PATH is developing the next generation of tools to accelerate efforts to detect, prevent, and treat malaria and to control mosquitoes.

**DIAGNOSTICS**

PATH, in collaboration with public and private sector partners, is pioneering the use of diagnostics for malaria elimination. We are improving access to available tests while advancing the development of new ones that support improved case management. PATH and its partners are also working to detect low levels of malaria infection that might otherwise be missed.

**VACCINES**

PATH’s pipeline of vaccine candidates and approaches, under development with partners from across the globe, is one of the most robust in the world. It includes candidates that would prevent infection and those that attempt to block transmission of the malaria parasite from humans to mosquitoes and back again.

**DRUGS**

PATH is working to improve malaria treatment so that no one who contracts the disease dies from it. We are ensuring a stable supply of malaria drugs and strengthening the existing supply. We are also strengthening health systems and improving the quality of malaria case management in Africa and the Mekong Region.

What will it take to end malaria?
To develop the science behind how to eliminate malaria in Africa, we are piloting new strategies with the goal of developing a package of approaches that are adoptable and adaptable across the region. These include strategies to stop the transmission of the malaria parasite from humans to mosquitoes and back again through community-wide treatment. We are collaborating closely with endemic countries to create malaria-free zones, the first step on the path to elimination.

PATH is partnering with national programs to optimize the delivery of current solutions and approaches, while developing new strategies to eliminate malaria in local and regional settings.

PATH is working with partners to use data in new and better ways to track emerging transmission patterns, optimize the way resources are deployed, and eventually track down the last malaria parasites.
