

From the President and Board Chair

Greetings,

We are pleased to present PATH's 2009 annual report. We hope you will enjoy this year's shorter and more innovative approach to highlighting our recent milestones.

The world is entering a pivotal time in global health. Never before have we seen such tremendous political and financial support. And never before have we faced—indeed, set—such high expectations. In 2015, when progress toward the Millennium Development Goals is assessed, we will clearly see whether the global community had the will and capacity to solve the greatest health challenges.

As we enter a new decade—and, in Seattle, a new home for our headquarters—PATH's capacity and resolve to meet these challenges is greater than ever. Our achievements are saving lives today and signaling even greater promise for the future.

The strength of our partnerships has been the cornerstone of our progress and impact. Your collaboration and support are central to our work, and we are grateful for your continued commitment to global health. Thank you.

Sincerely,

Christopher J. Elias, MD, MPH

President and CEO

Molly Joel Coye, MD, MPH Chair, Board of Directors

2009: THE YEAR IN REVIEW

As the first decade of the 21st century comes to a close, PATH and our partners are gaining momentum. We are making demonstrable progress in our effort to improve health for the world's most vulnerable populations.

The world is witnessing the impact that innovative solutions can achieve on seemingly insurmountable global health problems. Substantial political and financial commitments from governments, foundations, individuals, and the private sector are leading to tangible progress. Countries are gaining ground in the struggle against malaria. Health programs are preventing cervical cancer. Child mortality rates are dropping. Investments in global health are paying off in terms of real lives saved.

Alongside these gains, however, are stark reminders of the complexity of our challenge. Countries with strong national leadership are making progress against the leading killers, but poorer and less-developed countries and communities are experiencing more concentrated burdens of disease and increasing health inequity.

With the most robust pipeline of innovative tools and technologies in our history, PATH and our partners are poised to overcome these inequities. We are an integral part of the global health solutions that are unfolding today. And we are challenging ourselves to come even closer to our vision: a world where innovation ensures that health is within reach for everyone.

New tools move into use

PATH, our partners, and the countries and communities we work with have a tremendous capacity to develop solutions. But it can take years to bring new technologies or program approaches from concept into widespread use. In 2009, we moved many technologies and tools along the "innovation pipeline." To accelerate their development, we applied strategies—public-private partnerships, user-centered research, refined market and commercial assessments—that moved these solutions ahead as efficiently as possible.

Our Malaria Vaccine Initiative (see inner fold) serves as one example of this approach. To accelerate development of the world's most

promising malaria vaccine, the partnership launched a multicountry trial, pioneered the use of regulatory pathways, and worked with decision-makers to ensure that the vaccine will quickly move into widespread use if proven safe and effective. If regulatory clearance is granted, full availability is possible in five years or so, potentially saving hundreds of thousands of lives.

Solutions go where they're needed

PATH works to bring existing health solutions to people who need them. Through partnerships with national governments, local community organizations, and the private sector, we identify needs and determine how to extend the reach of health solutions. We then strive to ensure that health systems can deliver the solutions and that policies reinforce their use.

The Prevention of Postpartum Hemorrhage Initiative (POPPHI), described on the inner fold, illustrates how we bring health solutions to hard-to-reach populations. In Mali, the initiative conducted research that led to policy change and dramatically increased access to a proven, lifesaving intervention for excessive bleeding after childbirth. In Mali today, this policy change means mothers are more likely to survive to care for their babies.

Taking solutions to scale

Only in the past few years has the world begun to see new global health interventions make a difference at national or global levels. The "implementation science" for scaling up public health efforts in the poorest countries is still nascent.

One of PATH's most tangible contributions to these challenges is our ability to bridge gaps in implementation. Across each of our focus areas, we work to find new ways to deliver comprehensive health solutions. Just as important, we bring them into national or regional use, often in collaboration with governments and the private sector.

In 2009, for example, we helped integrate solutions to the deeply intertwined epidemics of HIV and tuberculosis. As this report shows, we built critical, sustainable connections across previously disparate treatment systems in Tanzania. The outcome of this work is a more effective approach to preventing the dual epidemics of HIV and tuberculosis and bringing more comprehensive services to people—49,000 so far—across the country.

Building on progress

PATH is ready to build on these and other achievements in 2010 and beyond. The next five years will be critical to reaching the global health community's ambitious goals. Working with our partners and supporters, we can move closer to achieving these milestones and improving the lives of people around the world.

THANK YOU FOR SHARING OUR VISION

Our donors are essential supporters of our vision of a world where health is within reach for all. In 2009, individual donors and family foundations contributed more than \$1.4 million of flexible "innovation funding," including gifts to PATH's Catalyst Fund and Fund for Health Technologies. Such funding allowed us to:

- Carry out 37 activities that helped us launch and pursue new initiatives. From establishing oral rehydration therapy corners in Kenya to testing mobile handheld devices as a tracking tool for tuberculosis, this support pushed our work forward in every area of need.
- Leverage six major grants for projects focused on areas such as vaccines and childhood immunization, diagnostic technologies, and better feeding practices for infants and young children.

 Meet strategic priorities, including new systems for understanding (and increasing) the impact of our work; critical support to our programs in Nicaragua and China and for HIV, maternal and child health, and malaria; and high-visibility international collaborations that increase our scope and range.

In 2009, Charity Navigator awarded PATH four stars for financial stewardship for the fifth year running, an honor accorded to fewer than 4 percent of rated

charities. Last year 89 cents of every dollar we spent was put to work in direct support of PATH's programs.

At the start of a new decade, we can imagine for the first time a world without malaria, where children no longer die for lack of basic health care, where women are empowered to protect their own health and the health of their families. Thank you for your contribution. And thank you for sharing our vision.

In 2009, more than 300 people joined us from our online communities to support the reestablishment of oral rehydration corners in clinics throughout Kenya, giving children effective treatment for one of the country's most dangerous childhood killers: severe diarrheal disease.

Notes: The above financial summary is an excerpt from PATH's audited financial statements, which are audited by the firm Clark Nuber P.S. Full copies are available on our website at www.path.org.

PATH is an international, nonprofit, nongovernmental organization. Our mission is to improve the health of people around the world by advancing technologies, strengthening systems, and encouraging healthy behaviors. Contributions to PATH are tax-exempt under US IRS code 501(c)(3).

OUR WORK

PATH focuses on moving global health solutions—technologies, tools, and interventions along the pathway from innovation to impact. With more than 80 projects and hundreds of partners, we use creativity and collaboration to improve global health every day.

The summary below provides an overview of PATH's 25 largest projects, and the map to the right highlights many of our most significant accomplishments of the year.

■ The "innovation funding" icon identifies PATH projects that received flexible support, such as support from individual donors, at a critical phase of their development.

PATH lessens the burden of epidemic diseases-including malaria, tuberculosis, and HIV/AIDS—as well as emerging threats such as pandemic

AIDS, Population, and Health Integrated Assistance II This community-based project promotes healthy behaviors and increases the use of health services in Kenya's Western Province.

PATH and our partners are improving the quality, availability, and use of services that prevent mother-to-child transmission of HIV

Malaria Control and Evaluation Partnership in Africa (MACEPA) MACEPA supports sub-Saharan African countries in rapidly scaling up and sustaining the impact of malaria prevention and control efforts.

Technical Assistance Support Contract, Tuberculosis (TB) Sector PATH provides short- and long-term technical assistance to countries with high TB burdens.

HEALTH TECHNOLOGIES

PATH brings appropriately designed, affordable, and innovative technologies to low-resource settings. Our interventions help to improve immunization, nutrition, diagnosis, child survival, and maternal and reproductive health.

Health Innovation Portfolio Our "innovation engine" explores and tests new ideas for technology solutions to global health problems.	•
Jet Injectors for Delivery of Vaccines This project focuses on sterile, single-dose, needle-free syringes for administering vaccines.	<u>\$</u>
Safe Water Project This project seeks to bring household water treatment and storage products to the world's poorest consumers.	Ģ.
Technologies for Health (HealthTech IV) HealthTech has focused on adapting, designing, developing, and advancing technology solutions since 1987.	
Thermostable Vaccines This project explores approaches that protect vaccines from heat and freeze damage.	

ATERNAL AND CHILD HEALTH

PATH improves the health of women and children by applying promising approaches to address the leading causes of maternal and child death. Our projects focus on safe birth and newborn care, nutrition, and the control of diarrheal disease.

Infant & Young Child Nutrition (IYCN) Project IYCN works to improve nutrition during the critical time from pregnancy through the first two years of life.	
Prevention of Postpartum Hemorrhage Initiative (POPPHI) POPPHI focused on prevention and early treatment of postpartum hemorrhage worldwide.	ō.
Sure Start PATH and our many partners are reducing infant and maternal illness and death in India.	
Ultra Rice® When blended with traditional rice, nutrient-rich Ultra Rice® meets the needs of low-resource, rice-consuming populations.	

PRODUCTIVE HEALTH

PATH works to prevent cervical cancer; advocate for services and supplies; address family-planning needs; prevent sexually transmitted infections, including HIV; expand options for abortion-related care; and encourage healthier behaviors.

VACCINES AND IMMUNIZATION

PATH closes gaps in access to lifesaving vaccines. Our projects accelerate vaccine research and development, expand access to new vaccines, and strengthen health systems.

Human Papillomavirus Vaccines: In India, Peru, Uganda, and Vietnar effective vaccination strategies for	m, PATH is exploring the most	Ċ.

New policy brings hope to mothers in Mali

The Prevention of Postpartum Hemorrhage Initiative (POPPHI), a five-year US Agency for International Development project led by PATH, worked to reduce the leading cause of maternal death: excessive bleeding after childbirth. The problem has largely been solved in the industrialized world, but it remains a critical issue in poor countries, where as many as one in eight women die during childbirth.

POPPHI used multiple approaches—training health care providers, strengthening policies, scaling up proven interventions—to prevent postpartum hemorrhage in 40 countries. In Mali, for example, the team worked to expand access to oxytocin, a lifesaving drug that was available only by prescription. The team worked with the government to show that auxiliary midwives, who support most births in rural areas,

1

could safely administer the drug in the Uniject® prefilled injection device. After reviewing POPPHI's research, Mali changed its policy and authorized the midwives to use oxytocin. The policy change brought a proven intervention to a new cadre of health workers and, in turn, to the thousands of expecting mothers they serve.

Combined HIV-TB services reach across Tanzania

About half of Tanzanians diagnosed with tuberculosis (TB) are also infected with HIV. Unfortunately, approaches for treating AIDS and TB have traditionally been separate. Patients seldom have opportunities to be diagnosed or treated for both infections, and steps that would bring services closer together—such as providing HIV tests for people with TB or TB tests for people with HIV—are simpler in theory than they are on the ground.

PATH is helping to solve this challenge. Last year our team trained more than 2,000 health workers in TB and TB-HIV infection control. The project expanded to 31 districts—roughly a third of the country—and improved services for more than 49,000 people. The model is strengthening Tanzania's health system and demonstrating that high-quality TB-HIV services can be provided and scaled up in low-resource settings.

The Meningitis

Health Organization—

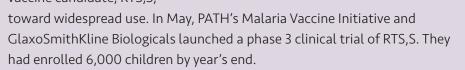

Malaria vaccine candidate enters pivotal trials

2009 was a landmark year for moving the world's most promising malaria vaccine candidate, RTS,S,

PATH worked with many of the sites to upgrade their infrastructure and to train staff to equip them to conduct RTS,S trials to the highest standards. The trial ultimately will involve up to 16,000 children at 11 trial sites in seven African countries—making it one of the largest, and arguably one of the most complex, vaccine trials ever undertaken in Africa.

PATH is also working with the World Health Organization and stakeholders from sub-Saharan African countries to develop a framework to expedite decision-making on vaccine adoption. This is just one of many activities aimed at ensuring that the vaccine—if approved for use—will be available to those who need it as rapidly as possible.
