

DRIVING TRANSFORMATIVE INNOVATION...

A close-up photograph of a group of young girls, likely of Southeast Asian descent, smiling and posing for the camera. They are wearing white school uniforms with red bows. Several girls are making peace signs with their hands. The background is slightly blurred, showing more children and a building.

...TO SAVE LIVES

At PATH, we
dare to believe
that innovation
can change
the world.

PATH drives transformative innovation in pursuit of a bold vision: a world where health is within reach for everyone, no matter where they live.

We advance health equity in the belief that no child should die of a preventable disease, that all mothers should have safe births and healthy newborns, that every community should have the tools it needs to thrive.

OUR APPROACH

PATH is an international nonprofit organization that transforms global health through innovation. Our approach blends the entrepreneurial spirit of a business, the scientific expertise of a research institution, and the passion and on-the-ground experience of an international NGO.

For nearly 40 years, we have been pioneers in the development and delivery of health solutions. We accelerate smart ideas and mobilize partners to reach the world's most vulnerable women and children. Our work spans borders, sectors, and disciplines to shape the next generation of health innovations and maximize their lifesaving potential.

DEFINING INNOVATION

PATH is known for developing lifesaving health technologies with global impact. From the vaccine vial monitor that alerts health workers when a vaccine has been damaged by heat to low-cost diagnostics that detect malaria, diabetes, and other health threats in minutes, our tools and technologies reach millions of people around the world.

PATH accelerates transformative health innovations, including (clockwise from top): insecticide-treated bednets; the uterine balloon tamponade to manage postpartum hemorrhage; the Woman's Condom; the MenAfriVac[®] vaccine; and zinc tablets to treat diarrhea.

But innovation is more than technology. PATH also brings innovation to:

- **Collaboration.** We connect hundreds of diverse partners, mobilizing the expertise and resources of in-country and public, private, and nonprofit partners to improve lives.
- **Community engagement.** We tap the insights and expertise of the people we serve to create affordable, effective, and culturally relevant solutions with enduring health impact.
- **Market dynamics.** We create market-based solutions to bring health products and services in reach for low-income consumers.
- **Health systems.** We strengthen health systems by improving health care delivery, policies, financing, and processes to ensure lifesaving innovations are delivered efficiently and equitably.

TAKING INNOVATION TO SCALE

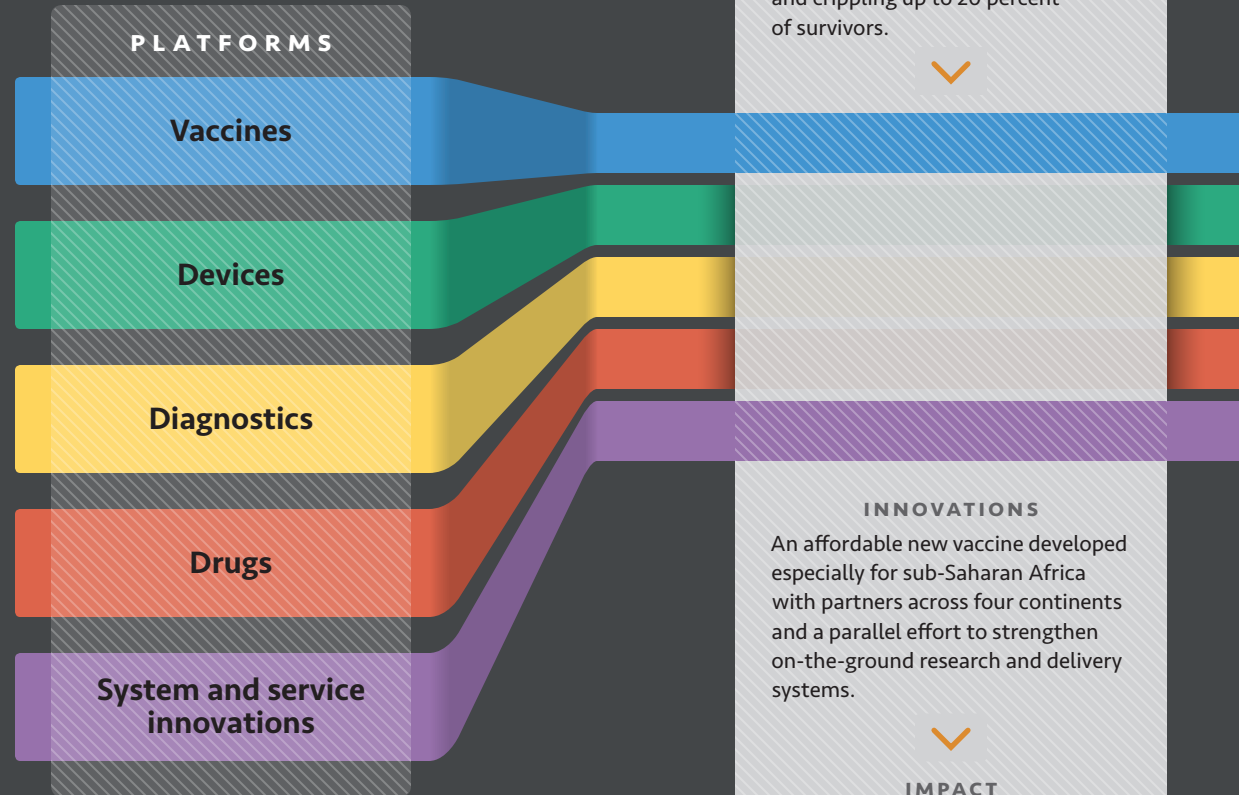

Across all of our innovations, we use a rigorous process to accelerate the best ideas through our development pipeline. We research and develop targeted health solutions, test and refine them, seek policy changes and regulatory approvals to pave the way for their use, and then introduce and scale them up where they are needed.

This is one of PATH's unique strengths—working across the spectrum from development to delivery, channeling the tremendous potential of inventive ideas, scientific discovery, and groundbreaking collaborations into better health and opportunity for all.

Our innovation platforms

Our work spans five platforms to reach women and children in more than 70 countries.

MALARIA

Malaria kills 660,000 people every year and sickens millions more, creating a staggering financial burden on communities and health systems.

CERVICAL CANCER

Screening tools and vaccines to detect and prevent cervical cancer are often out of reach for low-income countries, home to nearly nine in ten women who die from the disease.

DIARRHEA AND PNEUMONIA

Diarrhea and pneumonia are leading killers of young children, claiming an estimated 2 million lives annually.

INNOVATIONS

A comprehensive new strategy to create malaria-free zones, expand health worker training, accelerate vaccine development, build a stable supply of malaria drugs, and advance new diagnostics.

IMPACT

Malaria cases have dropped dramatically in our target countries. Now we have set our sights on an audacious goal: a world free of malaria.

INNOVATIONS

An affordable rapid screening test for use in even basic health clinics to detect the primary cause of cervical cancer and pivotal demonstration projects to inform countries on vaccination strategies.

IMPACT

Our work paved the way for Peru and Uganda to launch national immunization campaigns against cervical cancer and helped drive new global investments to get vaccines to millions more girls.

INNOVATIONS

A coordinated approach with new vaccine and drug candidates, new devices to provide safe drinking water, and expanded access to existing vaccines and treatments through advocacy and health worker training.

IMPACT

We supported the introduction of rotavirus or pneumococcal vaccines in 26 countries. Our work led Cambodia to launch an integrated strategy against both threats and helped bring safe drinking water to families across Africa and Asia.

PATH'S GLOBAL PRESENCE

- Offices in 22 countries.
- 1,200+ employees.
- 2012 revenue of \$313 million.
- Headquarters in Seattle, Washington, United States.
