President and CEO, PATH

# REACH CAMPAIGN **SNAPSHOT**

SUMMER 2016

## REACHING HIGHER

In May, we celebrated an incredible moment in the Reach Campaign’s history: reaching the \$100 million mark eight months before the predicted close of the campaign. Now, thanks to this tremendous response from our donors, we are daring to dream bigger.

**PATH is extending the campaign and setting a new goal: raise \$125 million by the end of 2017.** The momentum of the Reach Campaign is still growing—and so is its potential for impact around the world.

# YOUR IMPACT THROUGH THE REACH CAMPAIGN

Our progress since the last update exemplifies the power of private philanthropic support, demonstrating the great strides we can make with the right combination of support, partnership, and expertise. Early funding for the Reach Campaign from thousands of individuals, family foundations, and corporations has fueled progress in each of the four campaign initiatives.

We now have the chance to build on these successes. Extending the Reach Campaign to 2017, with a new goal of \$125 million, will allow us to act on new opportunities that cut across all four of the campaign initiatives—and take PATH's work to the next level. Funds raised in the final phase of the campaign will be critical to our work over the next years, helping us sharpen our strategies in Africa and Asia, advance great ideas from the ground up in the countries where we work, and move toward the elimination of stubborn diseases.

**Together, we can accelerate progress toward a world where health is within reach for everyone.**

## MALARIA ELIMINATION

PATH's Center for Malaria Control and Elimination, launched with funding from the Reach Campaign, aligns our unparalleled portfolio of malaria projects and tools. Through the center, we are not only accelerating progress toward elimination, we are leading the way toward a malaria-free world. PATH-pioneered approaches have contributed to 6.2 million lives saved over the course of 15 years.

### OUR PROGRESS:

**JANUARY 2016:** The World Health Organization recommended RTS,S—the world's most advanced vaccine candidate, which PATH helped develop—for a pilot program in Africa.

**MAY 2016:** The number of children with malaria in Zambia's Southern Province dropped 93 percent after implementing our innovative approach to tackling the disease.

## MATERNAL AND NEWBORN HEALTH

Pregnancy and childbirth are risky in low-resource countries, but it doesn't have to be this way. Simple, low-cost innovations can save millions of lives. PATH is making the first 1,000 days healthy and safe for mothers and babies. With funding through the Reach Campaign, we have been advancing key technologies that address the health challenges women and infants face.

### OUR PROGRESS:

**APRIL 2016:** Community health workers in Mozambique and South Africa made more than 170,000 home visits, educating mothers about safe pregnancy and childbirth, nutrition, and the developmental needs of young children.

**MAY 2016:** PATH and our partners are working to make the NIFTY™ cup, an inexpensive feeding cup that allows infants to lap or sip milk at their own pace, available to the millions of babies in Africa and Asia who have trouble breastfeeding.

## WOMEN'S AND REPRODUCTIVE HEALTH

PATH is giving women the power to safeguard their own health. Healthy women are key to healthy communities, though they face the greatest burden of poor health in low-resource settings. Through the Reach Campaign, we're addressing this inequity by accelerating innovations and tools that enable women to plan their families and stay healthy.

### OUR PROGRESS:

**FEBRUARY 2016:** The Woman's Condom achieved prequalification by the World Health Organization and the United Nations Population Fund, paving the way for increased access worldwide.

**JUNE 2016:** We expanded access to two contraceptives, with more than 400,000 doses of the injectable contraceptive Sayana® Press administered in four African countries and the one-size-fits-most Caya® diaphragm available in more than 25 countries.

## CHILD HEALTH

PATH is dedicated to protecting children's futures by helping them thrive. To improve health outcomes for children, we recently launched the PATH Center for Vaccine Innovation and Access. The center draws on our nearly 20 years of success in vaccine development and delivery. With more than two dozen vaccines in the pipeline or in use, we are ensuring that every child has access to lifesaving vaccines.

### OUR PROGRESS:

**MARCH 2016:** Cambodia launched a series of vaccination campaigns against Japanese encephalitis that reached 4.3 million children and will add the vaccine to its routine immunization program, protecting children nationwide from this deadly disease for generations to come.

**JUNE 2016:** We targeted the two top killers of children—pneumonia and diarrheal disease—by advancing clinical trials of seven vaccine candidates against these threats.

*“We are all vulnerable to health issues, but for those in low-resource communities, the risks are even greater and can have far-reaching consequences. We want to be able to help those who need it most.”*
