

PATH then led an evaluation of potential development partners for the software solution. With the goal of building a self-sustaining system, [Health Information Systems Programme](#) (HISP) in India was selected to adapt an open source platform ([DHIS2](#)) to provide the necessary structure and data analysis tools to achieve stakeholder needs.

Using an agile development methodology, the team released Immunization Repository 1.0 in 2013. Features included:

- Immunization related data for 195 WHO member states and seven WHO regions and sub-regions.
- 420 data elements across 18 programmatic Areas of Work with data imported from multiple alliance sources.
- Global and regional dashboards for calculation and tracking of 18 key flag indicators with easy visual cues.
- Cross-cutting regional and country reports that presented data values as well as helpful qualitative discussions stored in the repository.
- Access for over 300 users among the alliance including data collectors, consumers and donors at WHO, Gavi, UNICEF, the Bill & Melinda Gates Foundation and WHO Regions.

STEP 4: DEPLOYMENT

The Repository was further refined over five months to increase features and functionality by 60 percent. Powerful data visualization and GIS tools were added along with custom reports and data entry tools.

PATH also developed and led hands-on training to build comprehension and reinforce adoption by end users. The training process and addition of data to the Repository began to shift behavior patterns from guarded information practices towards online sharing and openness. Users could now update and review data in near-time and create data visualizations and reports previously unattainable.

“[The repository] represents an important step forward on collecting, organizing and sharing essential data for decision making.”

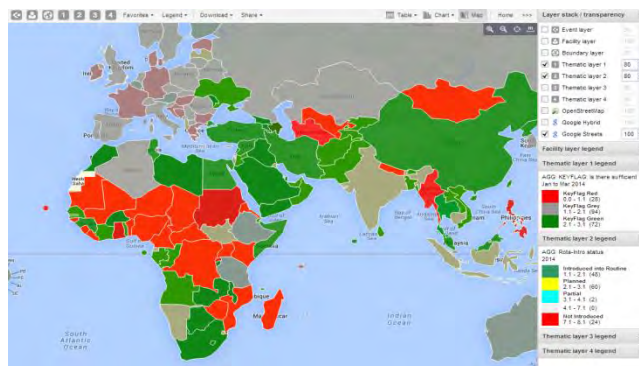

—2014 Repository user adoption survey comment

PATH transitioned the long term management of the system to WHO for continued development and operations at the end of March 2014.

STEPS 5 AND 6: USAGE AND SCALE

While the Repository exceeded the initial goals of the project, now reaching almost 450 users from the 194 WHO member states, there is potential to scale it even further:

- Create deeper integration and sharing with existing external data sets from other Gavi partners.
- Provide data reporting analytics and user rights to help countries prepare Gavi applications.
- Provide access and updates at the country level to alleviate data collection burden and share data in near real-time enabling data aggregation and improved decision making.
- Combine and summarize immunization supply chain data below the country level to help with forecasting, or monitor immunization coverage data to identify opportunities or potential hazards at an early stage.

Geographic information system example of cold chain key flag indicator status and Rotavirus introduction plans overlayed to visualize readiness.

HEALTH IMPACT DELIVERED

The introduction of the Immunization Repository brought the project partners together on one common and shared platform so that they can now:

- Focus attention on key indicators of success for new vaccine introductions.
- Apply resources to remove barriers.
- See the full picture of a country's needs.
- Address problems as they arise.

This work was funded by the Bill & Melinda Gates Foundation. For more information please contact Breese Arenth barenth@path.org or visit <http://sites.path.org/hmis>.

PATH is the leader in global health innovation. An international nonprofit organization, we save lives and improve health, especially among women and children. We accelerate innovation across five platforms—vaccines, drugs, diagnostics, devices, and system and service innovations—that harness our entrepreneurial insight, scientific and public health expertise, and passion for health equity. By mobilizing partners around the world, we take innovation to scale, working alongside countries primarily in Africa and Asia to tackle their greatest health needs. Together, we deliver measurable results that disrupt the cycle of poor health. Learn more at www.path.org.
